How is SSD Multi-Account Hosting different from SSD Shared Hosting?

Helpdesk Staff - 2020-09-01 - Commentaire (1) - SSD Shared Hosting

Both our SSD Shared and SSD Multi-Account plans are based on the same backend server architecture. The main difference is the additional ability and reseller-only functions, such as cPanel's Web Host Manager (WHM) that are offered exclusively with our SSD Multi-Account plans, giving you the ability to manage multiple end-user accounts. SSD Multi-Account plans are a great, cost-effective alternative to purchasing multiple separate SSD Shared Hosting plans, since you can manage all of your domains/websites and accounts within a single unified interface.
