What is Softaculous?

Helpdesk Staff - 2020-09-01 - Commentaire (1) - General Questions

Softaculous lets you focus on using apps rather than spending time on installing them. Install PHP, Perl and JavaScript applications to your domain with just a single click. These include popular scripts like WordPress, Joomla, XenForo, phpBB, Magento, MediaWiki and more.

There are a wide variety of applications are available to be easily installed on our plans, including web portals, e-commerce solutions, content management systems, blogs, polls, forums and more. Softaculous also has an easy-to-use auto-update (to keep your scripts automatically updated) and backup feature, allowing for the backup of installations at anytime.
