What backup options are available?

Helpdesk Staff - 2021-01-05 - Comments (0) - General Questions

We automatically take daily backups with our SSD Shared & SSD Multi-Account, intended to protect against major disasters. They are not intended to be relied upon for daily use. However, if you rely on snapshots or want to revert your site to another time quickly and easily on your own without restrictions, we offer a number of flexible backup system options: (1) a remote backup facility using JetBackup and integrated within cPanel, available on any SSD Shared & SSD Multi-Account plan for a nominal fee; or (2) more advanced backup options through our partnership with CodeGuard. You can add either option when placing your order for the first time or via myPolur at any time.
